

The prototype and user journey below reflect the current state of self-coaching on the driver app. The driver must first navigate to the Safety Activity feed. From the Safety Activity feed, the driver can go to the Event Detail page for each individual coachable event. The driver must view each event from start to finish in order to complete self-coaching. Notes are not required.

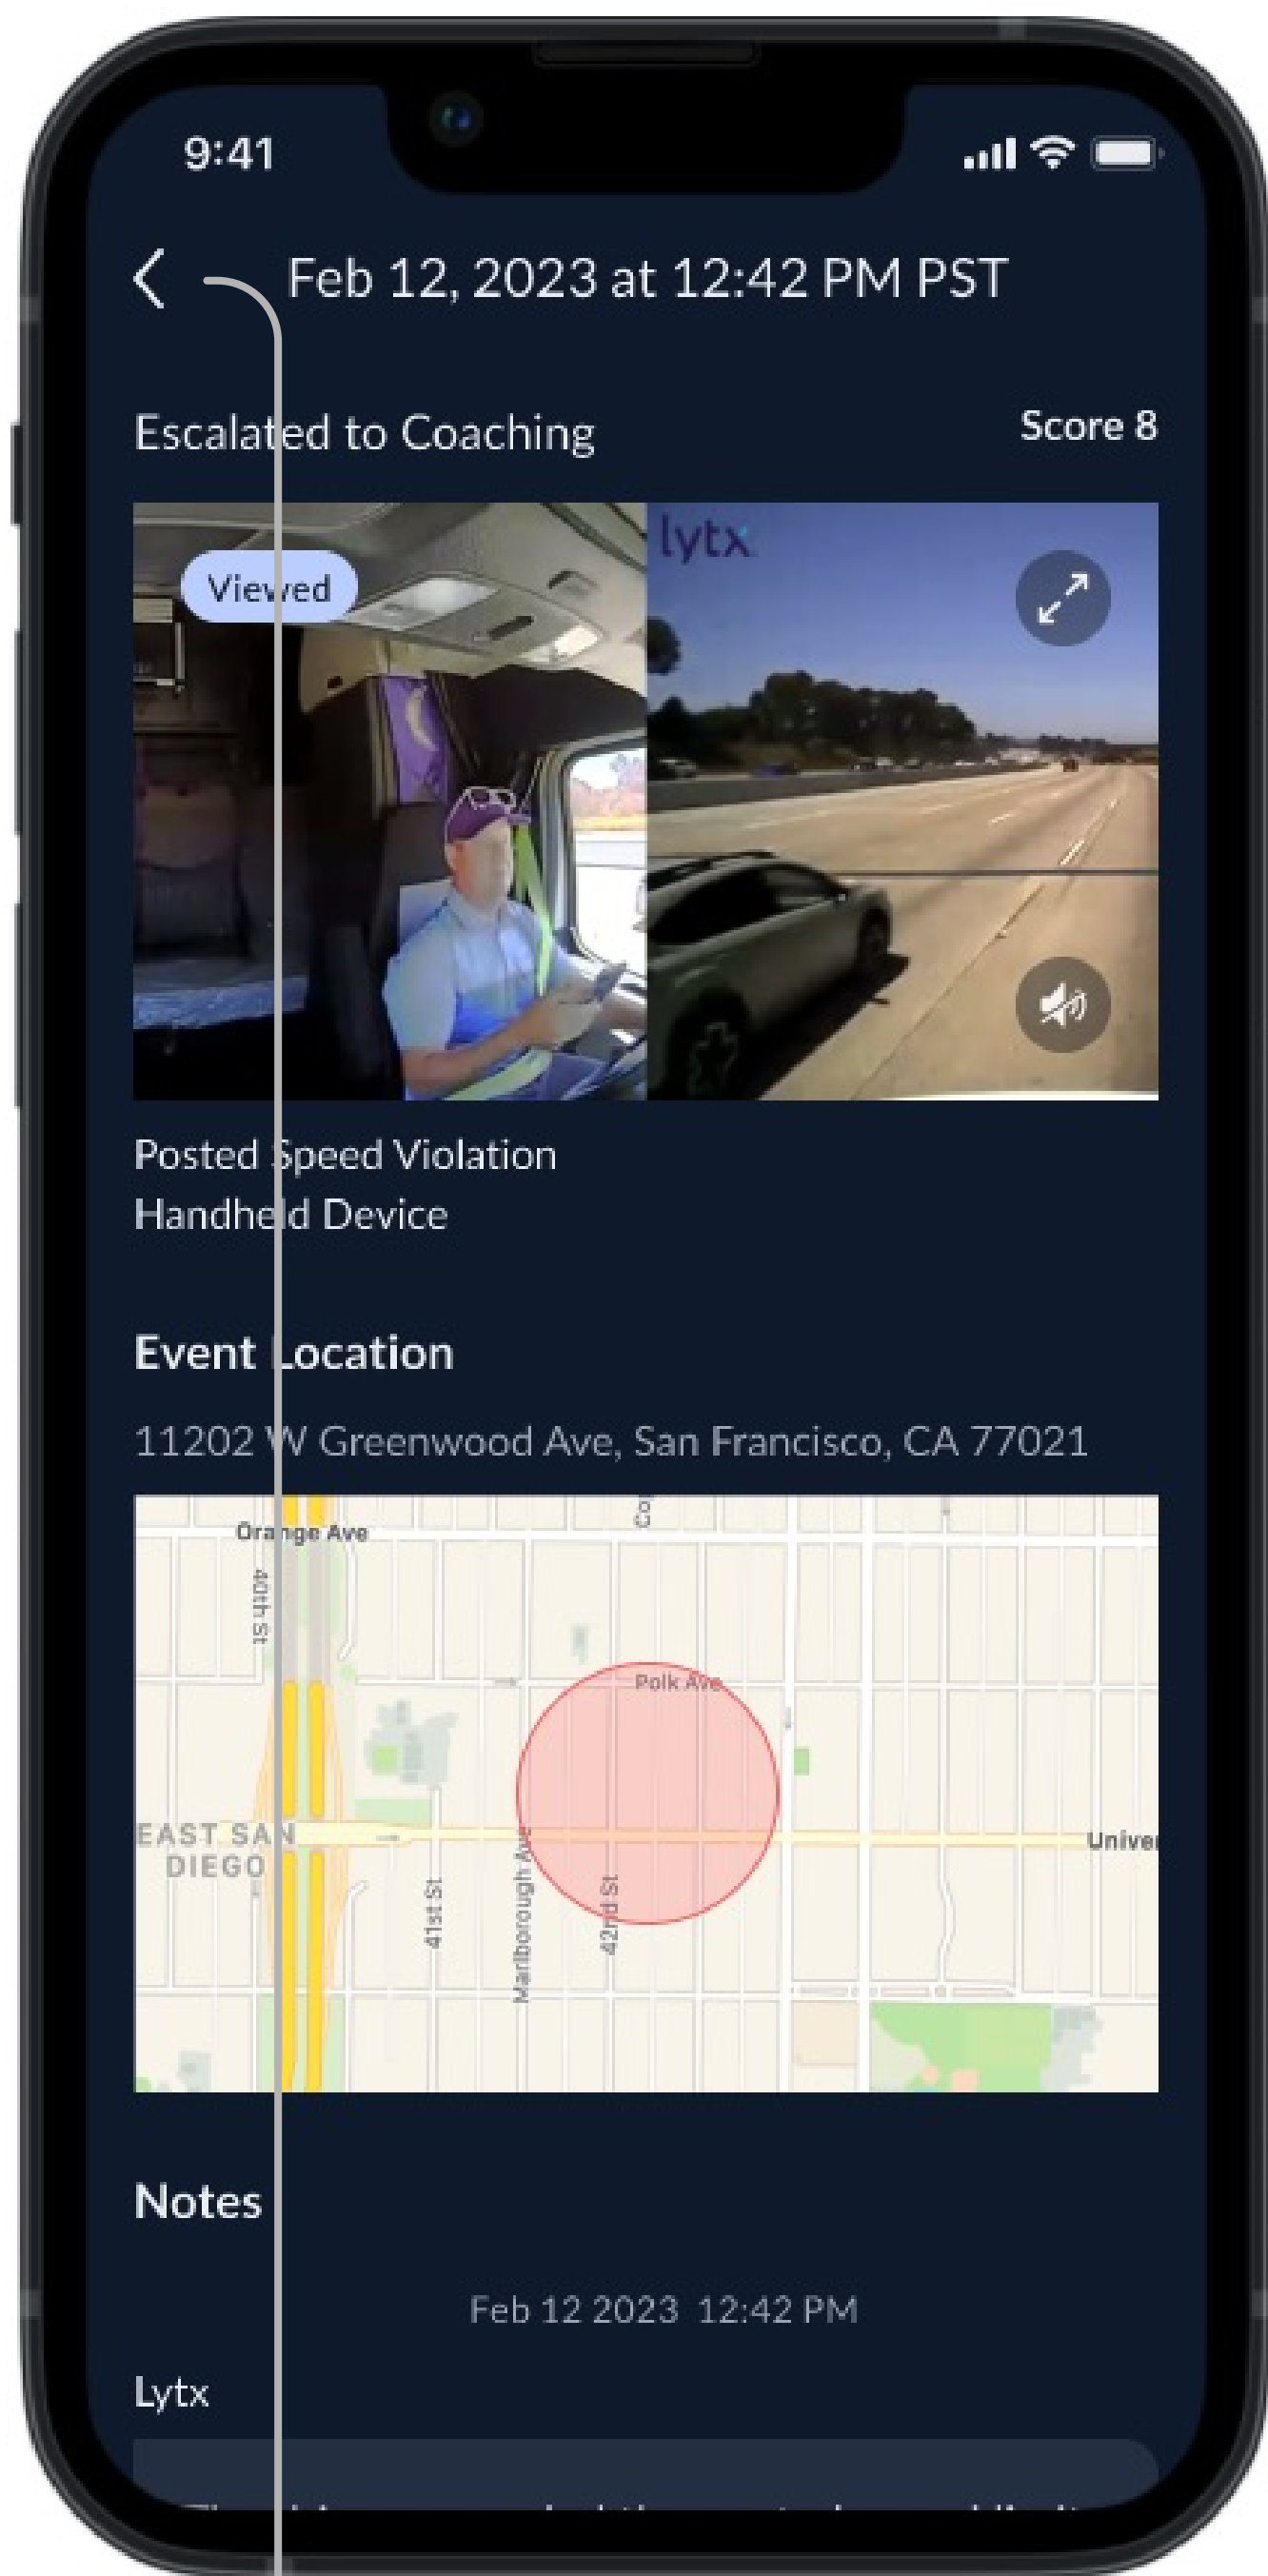

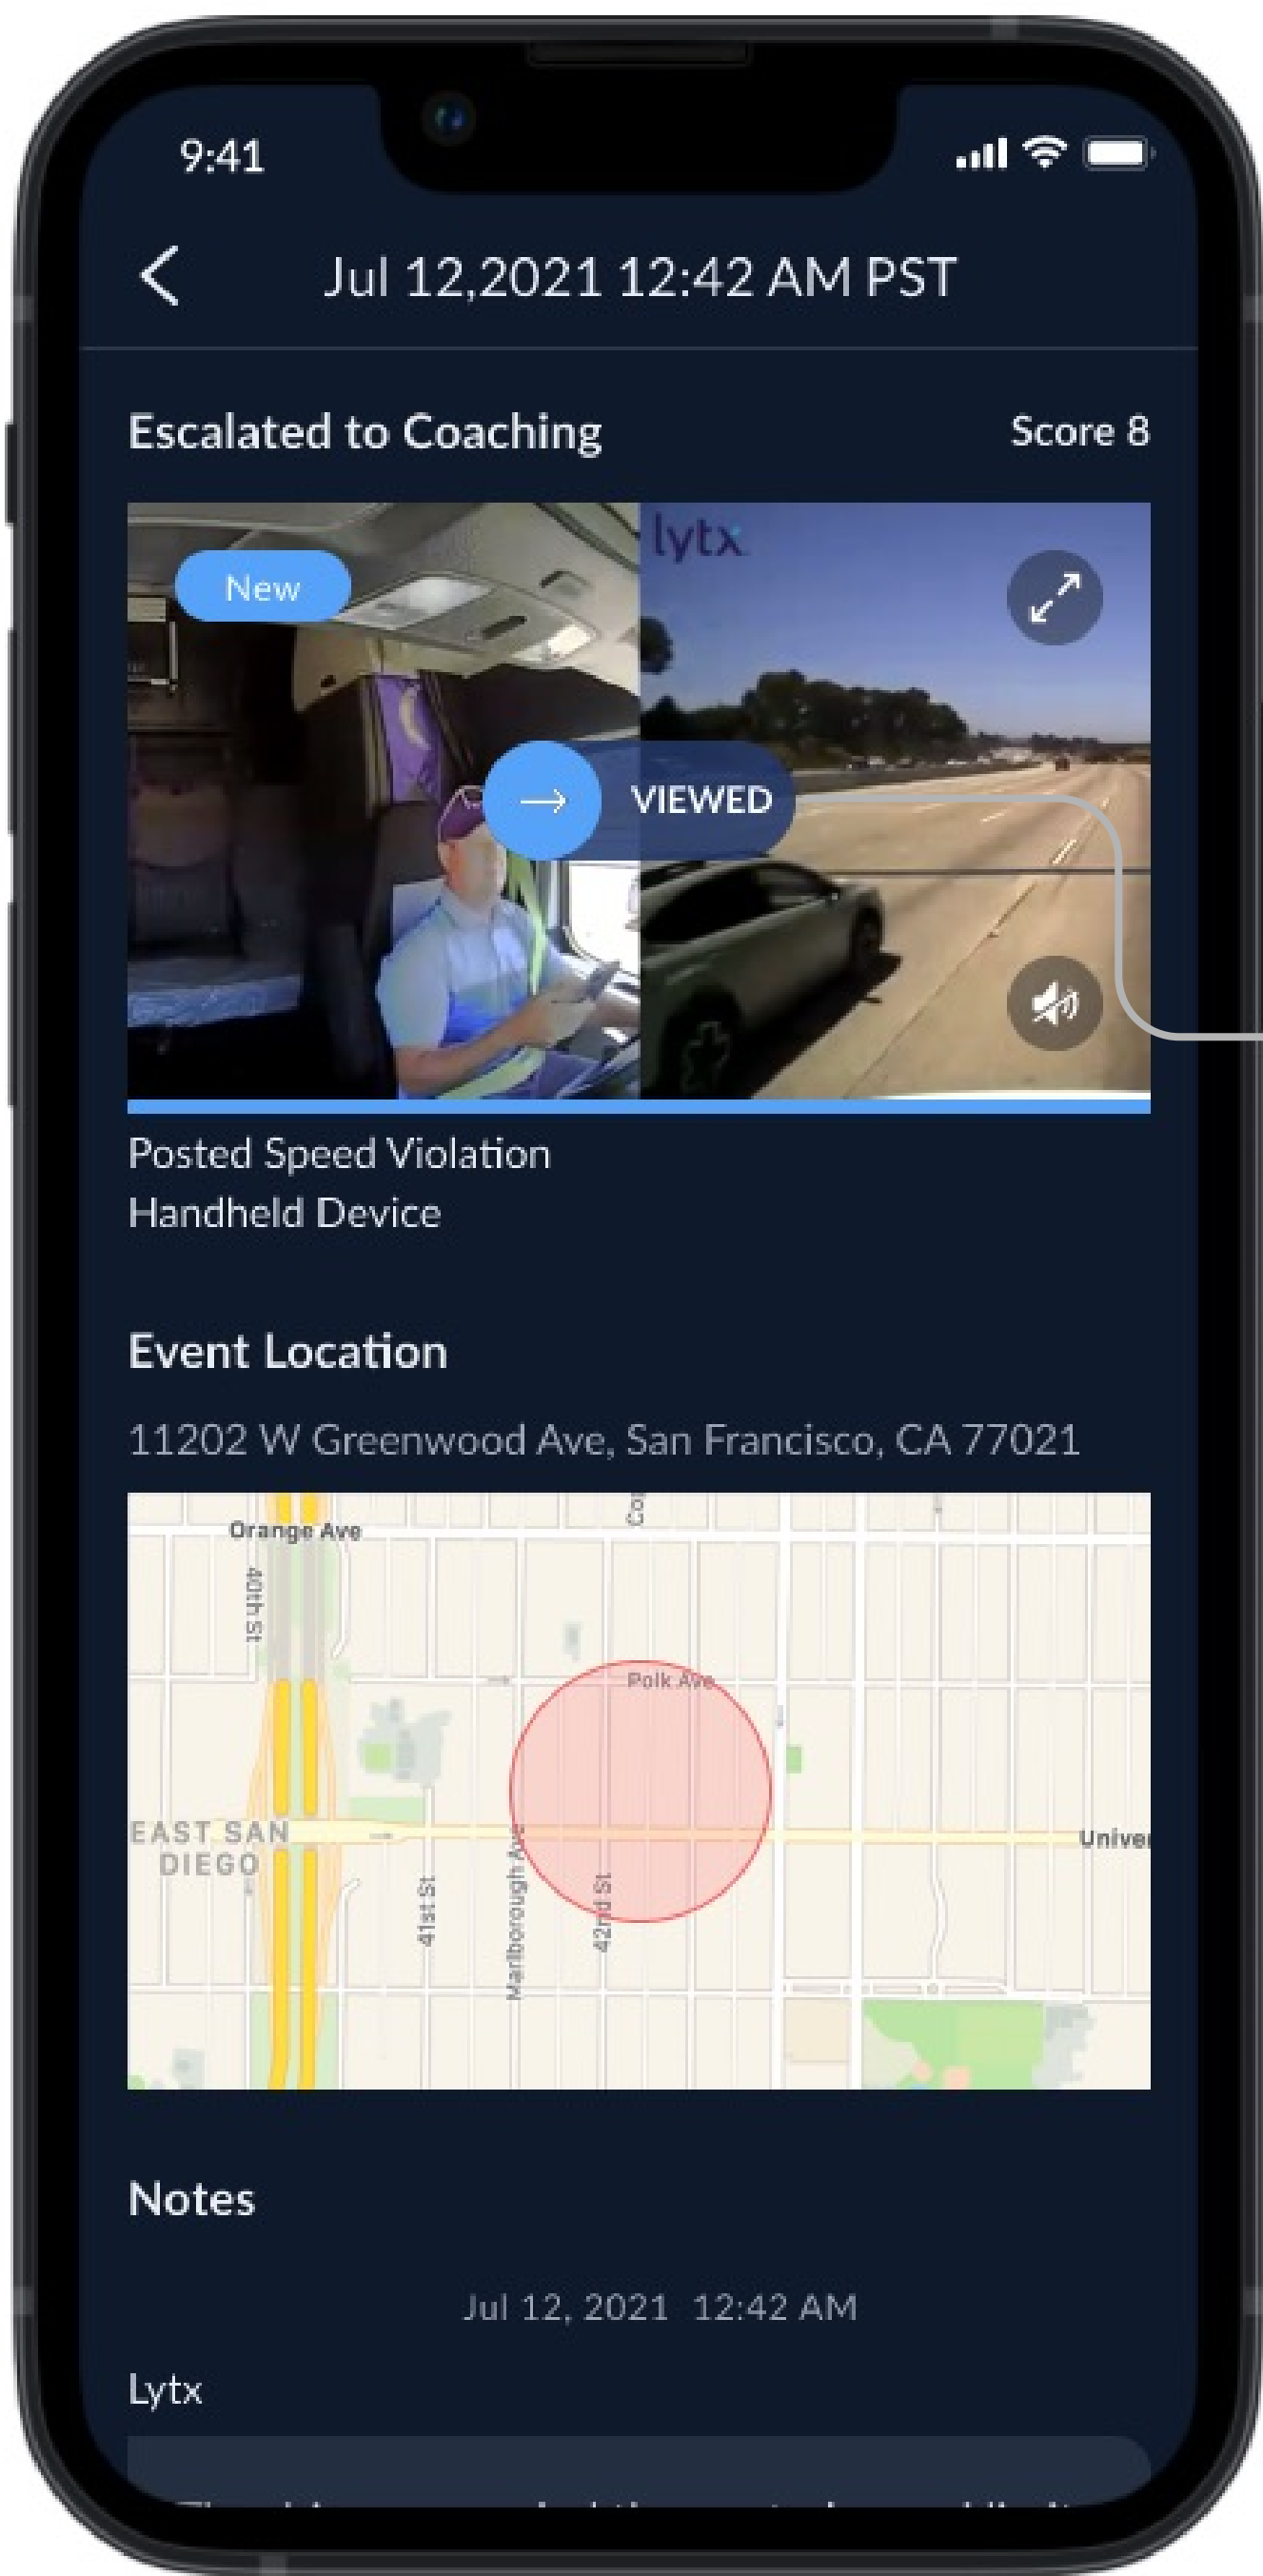

User Flow (Current State)

[Home landing page](#)

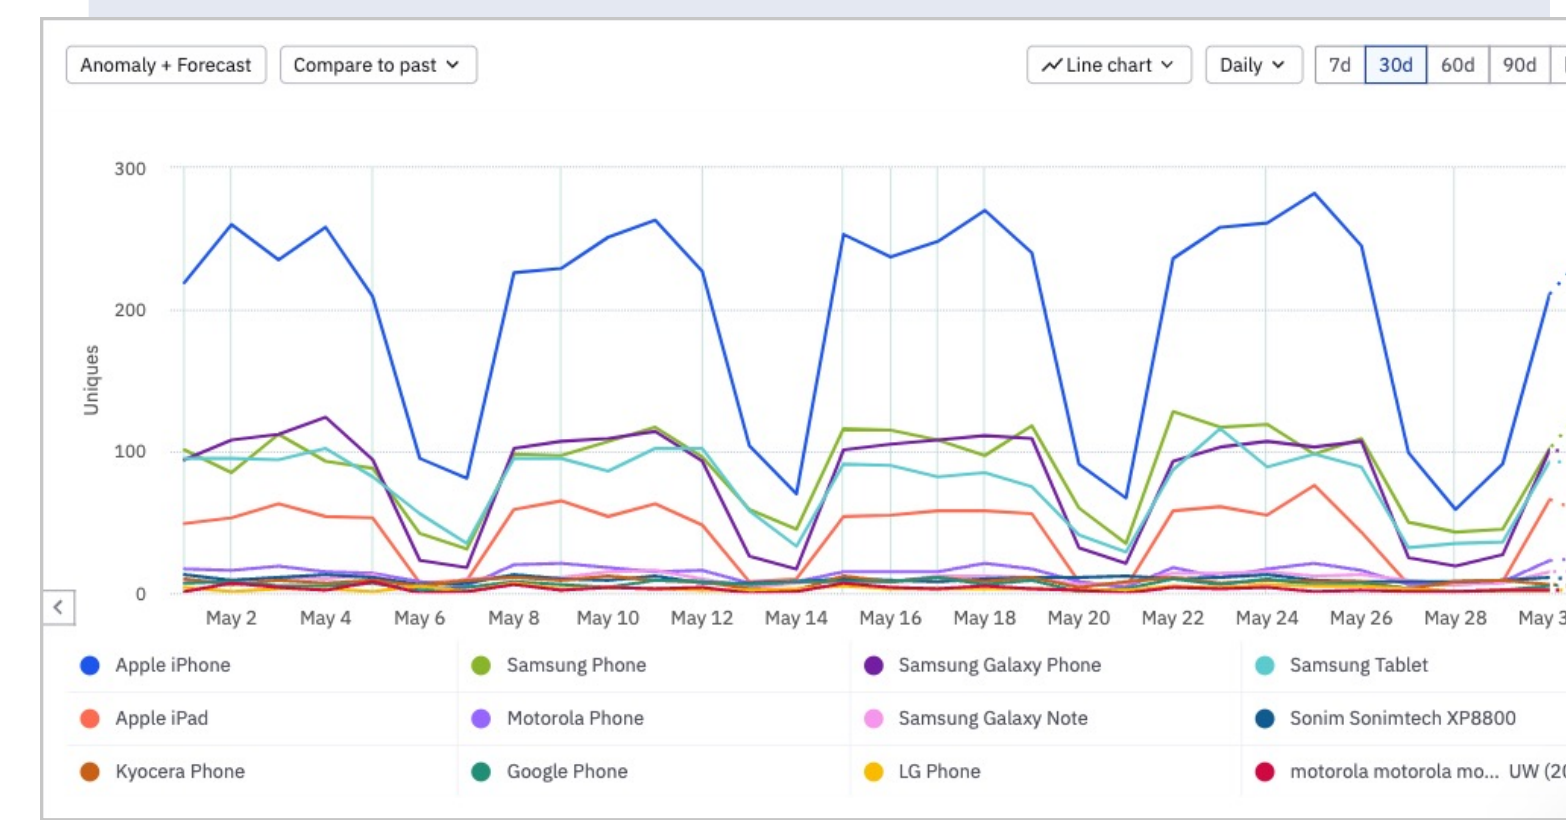

[View Event Detail](#)

Once event had been viewed, swipe to complete self-coaching for event

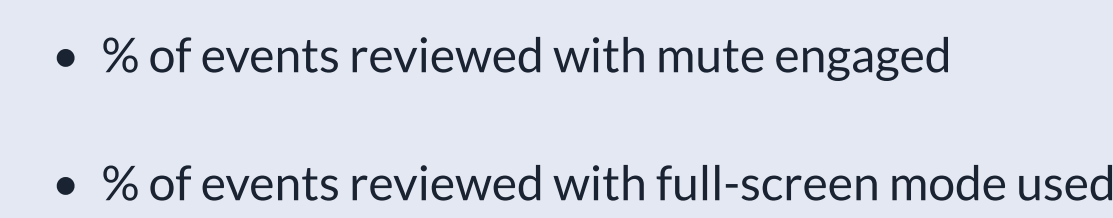

Tap back button to return to Safety Activity feed

- Daily # of logins on Driver App – already in Amplitude

- Average # of coachable events reviewed in a session
- Average % of coachable events reviewed in a session
- Average time to self-coach once event becomes coachable

- # of Event Details Views – already in Amplitude

- Average duration of event review
- % of event reviews started that are completed (i.e., event is swiped and marked as "viewed")
